

CONTACT INFORMATION	Mechanical Engineering University of Delaware 130 Academy Street Newark, DE 19716 USA	(302) 831-2150 JKuehl@udel.edu
EDUCATION	University of Rhode Island , Kingston, Rhode Island, USA	
	Ph.D., Mechanical Engineering Applied Mechanics, August 2009 <i>Advisor: Professor David Chelidze</i>	
	Ph.D., Physical Oceanography, December 2009 <i>Advisor: Dr. Vitalii Sheremet</i>	
	Michigan Technological University , Houghton, Michigan, USA Bachelor of Science in Physics	
CURRENT EMPLOYMENT	Assistant Professor (August 2017 - Present) <i>University of Delaware, Department of Mechanical Engineering</i>	
PREVIOUS EMPLOYMENT	Assistant Professor (August 2014 - August 2017) <i>Baylor University, Mechanical Engineering Department</i> Assistant Research Scientist (March 2012 - July 2014) <i>Texas A&M University, Geochemical and Environmental Research Group</i> Postdoctoral Researcher (September 2009 - May 2014) <i>Texas A&M University, Department of Aerospace Engineering</i>	
RECOGNITION & AFFILIATIONS	National Academy of Sciences, Engineering and Medicine - Gulf Research Program: Committee on Advancing Understanding of the Gulf of Mexico Loop Current Dynamics. Young Investigator Program awardee Air Force Office of Scientific Research. NATO working group: STO/AVT-240 Hypersonic Transition. Adjunct Faculty: University of Texas Marine Science Institute (UTMSI). Adjunct Faculty: University of Delaware College of Earth, Ocean and Environment.	
AWARDS	“ Development of In Situ Oyster Setting for Stock Enhancement and Restoration Purposes in Texas. ” NOAA - Texas SeaGrant. PI Dr. John Scarpa, Co-PI Dr. Cecily Steppe and Dr. Joseph Kuehl. Award amount \$279,686 (\$63,000). 02/01/2018 - 01/30/2020. “ Mixing in the Texas coastal zone through coordinated simulations and field measurements: the role of Langmuir cells in sediment suspension and oil-mineral aggregation. ” Texas General Land Office, Oil Spill	

Response. PI Dr. William Anderson, Co-PI Dr. Joseph Kuehl. Award amount \$293,779 (\$120,727). 9/1/2017-8/31/2019

“Global Dynamics Approach to Gap Leaping and Loop Current Systems.” NSF Physical Oceanography. PI Dr. Kuehl. Award Amount \$296,133. 3/1/2017-2/29/2020

“Bottom Current Monitoring of the Flower Garden Banks National Marine Sanctuary.” Supplemental Award to: Open-Coastal Ocean Connectivity Through Bottom Boundary Layer Observations and LES Modeling. Texas General Land Office, Oil Spill Response. PI Dr. William Anderson, Co-PI Dr. Joseph Kuehl. Award Amount \$27,000. 12/20/2016-8/31/2017

“Liquid Metal Battery Research & Development.” MFB Concepts INC. PI: Dr. Scott James, Co-PI: Dr. Joseph Kuehl. Award amount \$57,449. 6/1/2016-12/31/2016.

“Preliminary Study of Transport Pathways for Blue Crab Megalopae.” Big Twelve Faculty Fellowship Program, Baylor University - University of Texas Marine Science Institute. Dr. Joseph Kuehl, Dr. Edward Buskey. Award Amount \$2,500. Project location: Port Aransas Texas. 8/2015.

“Open Coastal Ocean Connectivity through Bottom Boundary Layer Observations and LES Simulation.” Texas General Land Office, Oil Spill Response. PI Dr. William Anderson, Co-PI Dr. Joseph Kuehl. Award Amount \$285,215 (\$140,098). 9/1/2015-8/31/2017

“The influence of multiple interacting primary modes and mode representation on hypersonic boundary-layer stability and transition prediction.” AFOSR Young Investigator Program, Research Area: Turbulence and Transition. PI: Dr. Joseph Kuehl. Amount \$359,000. 5/1/2015-4/30/2018.

“Reconstruction of Slow-Time (Fatigue Damage) Dynamics in Bone Using Fast-Time (Vibrations) Measurements.” Baylor University Research Committee Small Grant Program. PI: Dr. Carolyn Skurla, Co-PI: Dr. Joseph Kuehl. Award Amount \$3,923. 12/15/2014 - 05/31/2015.

“Reconstruction of Slow-Time (Fatigue Damage) Dynamics in Bone Using Fast-Time (Vibrations) Measurements.” Baylor ECS Faculty Research Grant. PI: Dr. Carolyn Skurla, Co-PI: Dr. Joseph Kuehl. Award Amount \$25,000. 06/01/2014 - 05/31/2015.

RESEARCH
THEMES

My research interests and experiences are broad. Yet, they share the common thread of fundamental, basic science which is my strength and has helped me to produce cutting edge research in three different fields of study: hypersonic boundary-layer stability and transition, geophysical fluid dynamics, and nonlinear vibrations. This multi-faceted research background has allowed me to find

connections between different fields of study, leading to new and novel solutions for complex problems.

ADDITIONAL
RESEARCH
EXPERIENCE

Pursuit Cruise TGLO_003a, March 2018 - August 2019. Deployment of 6-10 Seahorse TCM bottom current sensors and a bottom mounted ADCP on the Texas shelf, including monthly CTD surveys. Target depths between 15-35m.

Flower Garden Banks Monitoring, September 2016-December 2018. Deployment of 14 Seahorse TCM bottom current sensors, 3 dissolved oxygen sensors and 3 CT sensors on the FGB. This monitoring study is motivated by a mass coral die off, the cause of which has yet to be determined.

Pursuit Cruise TGLO_002a-f, October 2016 - February 2017. Deployment of 9 Seahorse TCM bottom current sensors and a bottom mounted ADCP on the Texas shelf, including CTD sections and C,T profile time series. Target depths between 40-900m.

Pursuit Cruise TGLO_001a-c, May-July 2016. Deployment of 10 Seahorse TCM bottom current sensors on the Texas shelf and shelf break, including CTD sections and C,T profile time series. Target depths between 30-200m.

Osprey Cruise GLRC_001, May 2016. Deployment of eleven Seahorse TCM bottom current sensors in Lake Superior. Targeted cross-slope sections of the Keweenaw current to identify cross-slope transport mechanisms controlling *Diporeia* populations. Also targeted transport mechanisms of toxic stamp sand off Gay Michigan which appear to be influencing *Diporeia* populations on the southern Keweenaw coast line.

Pursuit Cruise TGLO_000, January 2016. Trial deployment of six TCM bottom current sensors on the Texas shelf and shelf break. Target depths between 30-100m.

Port Aransas Ship Channel Study, August 2015. Preliminary study of bottom currents in the Port Aransas ship channel. Emphasis was placed on spatial distribution of currents to better understand transport processes.

Lake Waco Observing System, January 2015-Present. This pilot program uses low cost bottom current meters, temperature sensors and pressure gages to monitor the flow and sediment dynamics of Texas reservoirs.

R/V Pelican Cruise PE-1402, July 2013. GISR mooring turnover cruise. Recovery, turnover and redeployment of 6 moorings around the DeepWater Horizon oil spill site and hydrographic sampling of the surrounding area.

R/V Manta Cruise, June 2013. Slocum Glider test cruise.

R/V Ferrell Cruise, August 2012. Texas Automated Buoy System (TABS) buoy deployment/recovery cruise. TABS I, TABS II and 2.25 meter discuss buoys were replaced at part of the TABS scheduled maintenance. In addition, a short test deployment of the Responder buoy was conducted.

R/V Pelican Cruise PE-1301, July 2012. GISR mooring deployment cruise. Deployment of 6 moorings around the DeepWater Horizon oil spill site and hydrographic sampling of the surrounding area.

R/V Endeavor Cruise 440, October 2007. Line W cruise. Hydrographic sampling across the deep western boundary current off the New England coast.

R/V Endeavor Cruise 400, December 2005. Investigation of shelf break front with towed instrument and ADCP.

Research, Woods Hole Oceanographic Institution, Woods Hole, Ma.

Guest Investigator (09/2006 – 10/2007)

Rotating table experiments were conducted to study Scotian Shelf water “crossover” events. During such events Scotian Shelf water leaps the Northeast Channel of the Gulf of Maine from Browns Bank to Georges Bank. Crossover events have important implications for biological productivity on Georges Bank.

TEACHING
EXPERIENCE

Instructor

Fluid Dynamics 1+2: University of Delaware and Baylor University undergraduate level class.

Thermodynamics: Baylor University undergraduate level class.

Introduction to Oceanography (OCNG 251) Fall 2013 and Spring 2014, Texas A&M University undergraduate level class.

Introduction to Geophysical Fluid Dynamics (graduate level).

Boundary Layer Stability and Transition (graduate and undergraduate level).

Advance Vibrations (graduate level).

EDUCATION AND
OUTREACH

My outreach efforts center around the theme “Bringing Ocean Education Inland.” After having occasion to visit several grade and high school classrooms, it became obvious that basic understanding of ocean processes dramatically drops off as one leaves the coast. This gradient in knowledge/understanding represents a significant issue for policy makers, particularly concerning global environmental policy. As such, I am working to ‘bring ocean education inland’ via low cost observing systems. The goal is to: 1) Leverage lakes, rivers, reservoirs and other environmental features found in students backyards, of which they intuit. 2) Utilize low-cost sensors and develop ‘build-your-own’ observatories (following the model of Lego-type robotics clubs). 3) Relate data recorded locally to ocean observatory data. This long-term effort has gained momentum through collaborations with the Great Lakes Research Center at Michigan Technological University, Muskegon Community College, and NOAA via the Flower Garden Banks National Marine Sanctuary.

REVIEWERING

Ocean Modelling Special Issue “Gulf of Mexico Modelling: Lessons learned from the spill.” Assistant-Editor

Panel Reviewer: NSF Fluid Dynamics, NSF Physical Oceanography, GoMRI

Proposal Reviewer: NSF, GoMRI

Article Reviewer: Multiple Journals, Conferences, etc.
