Active learning experiences to develop communication skills for research, publication, or careers in biomedical fields.

Flexible curriculum including a term project that is customized to student’s interests and talents.

Frequent instructor and peer feedback- Receive (and give) constructive advice regularly to foster personal development of communication skills throughout the semester.

Biomedical Communication, offered in Fall 2015, will cover methodology, technique, and ethical issues fundamental to written, oral, and visual communications in the biologic and medical sciences. Topics include: scientific method/reasoning, hypothesis development, adaptation for audience, communication format and voice, types of publications, source citation, and peer review.

Tues./Thurs. from 12:30-1:45
